Subject: Bullets for Vermiculite Products for Carl (prep for his EJ Conference)
Date: Thursday, July 31, 2014 8:12:41 AM

Althea & Susan:

Thank you for the WE CAREs you had provided for the vermiculite sites (I'm saving it for the RA drill as well).

Carl asked me for quick speaking bullets on each "hot" site in Texas (What are the community concerns & what's next) for his EJ TX Conference next week:

I took a shot at some bullets for Vermiculite Products. Please comment and feel free to edit. I need it by cob today if possible. Thank you.

Susan: if there are other removal sites that should have some speaking bullets, let me know.

Vermiculite Products Removal:

- This is an old son of Libby vermiculite site in Houston which is located in an industrial area.
- Based upon a google earth search, there appeared to be approximately 8 old homes were near the site along with new construction beginning for condominiums.
- EPA quickly developed Flyers/Fact Sheets explaining our actions in the area and the site and went door to door to distribute information and contacts.
- EPA is planning a community meeting on 9/4 to provide information and a chance for the community to ask questions and express any concerns.
